

HuronTel Security Systems Wireless Quick Reference Guide

This is your security system keypad pictured at left. It is connected to the various wireless sensors placed around your home, and interfaces with the control panel. (See Figure 1)

Figure 1. Typical Security System Components

When an alarm signal is transmitted to our monitoring station, the alarm attendant will contact your premises first. You must remember to state your premise passcode as proof of your identification.

How do I?

Disarm the System:

KEYCHAIN TOUCHPAD

Arm the System:
(Windows/Doors & Motion Sensors)

Arm the System:
(Doors & Windows Only)

Arm the System:
(Motion Sensors Only)

N/A

Activate a Panic Alarm:

HuronTel Security Systems Wireless Quick Reference Guide

Possible Security Scenarios:

#1: "Someone is breaking in/I suspect someone is in my house/a situation has developed and I need help immediately."

-If you are outside of the home and have access to your keychain touchpad, press and hold both the ARM and DISARM buttons for 3 seconds. This will activate a PANIC ALARM.

-If you are inside the home, press the POLICE button twice to activate a PANIC ALARM.

#2: "My neighbour/friend is going to be checking my house while I am away on vacation."

-You can give your access code to the person, or allow them use of your keychain touchpad while you are away. Keep in mind if they loose the keychain touchpad, you are responsible for any damage that may occur and also for replacement of lost or stolen keychain touchpads.

#3: "The monitoring station has called and I have a low battery in one of my sensors."

-To change the battery in a motion sensor, first disarm the system (refer to reverse side of sheet). Depress the button on top of the unit to remove the back. Depress the 3 tabs and pull by the long side of the sensor to remove the inner casing. Replacement is 2 AA batteries. Put the sensor back together upon battery replacement.

NOTE: If you would prefer HuronTel changes the batteries for you in a sensor, there is a \$65 charge + the cost of batteries. Please call 1-877-395-3800 ext.1 if you require this service.

#4: "The power just went out! What happens now?"

-Typically, our SecurTek monitoring station will call you in the event of a power outage to confirm that this is the case. During this time, your system will switch over to battery backup and continue to transmit signals. Usually the system can run for roughly 7 hours on the battery.

#5: "I want to switch my keyholder to be someone different. Who do I call?"

-For all keyholder changes, please call our monitoring station SecurTek toll-free at 1-877-777-7591.

#6: "I set off my alarm accidentally. What should I do?"

-One of our monitoring station attendants will call your premises and confirm your PREMISE PASSCODE with you. This is information that only you should know, which validates your identity. From there, you can disarm your system by referring to the guide on the reverse of this sheet.

#7: "I want to add a security device to my system. Who do I call?"

-Call HuronTel at 1-877-395-3800 ext.1. There will be a charge for our installers to come out and visit your premises as well as for the cost of the extra sensor/peripheral, which can be added to your bill.
