Calix 836 Residential Gateway WIFI Setup Instructions

Thank you for signing up to Hurontel! This document will cover how to locate your SSID and WIFI Key needed to connect to your HuronTel Wireless Internet Service. The fibre optic ONT (Optical Network Terminal) is a piece of equipment that converts the optical signals sent from our network into signals that can be used by the devices in your home. Our current generation of equipment supports wifi, saving you the hassle of having to manage your own router.

Locating the ONT:

The ONT is usually installed in the utility room of your home or office, near your electrical panel and will look similar to the ONT pictured below:

Locating the SSID and Password:

The SSID and security key for your network is unique. A sticker with both the SSID and WPA Key (wifi password) will be attached to the ONT. You will need this password in order to connect to your Wifi. Please make a note of your SSID and Wifi Key in the space below:

SSID (Network Name): _____

WPA Key: _____

If this ONT has been installed as part of your service and you would like wifi enabled, please call

Goderich 519-612-3800 – Ripley 519-395-3800 – Wingham 519-912-3800 – Kincardine 226-396-3800
